Hiring Manager George Brown | Toronto, ON

Re: Junior Full-Stack Developer Application

To the Hiring Manager,

I'm a first-year Software Engineering student at George Brown College, and I'm writing to apply for the Junior Full-Stack Developer role at George Brown. I've spent the last year diving deep into backend development and systems administration, and I'm looking for a place where I can put my technical skills to work on real projects.

Lately, I've been focused on building a full-stack **Employee Management System** using **Node.js, GraphQL, and MongoDB**. I handled everything from setting up the Apollo Server to making sure the database schemas were solid. Beyond just coding, I'm comfortable working in a Linux environment—I've spent a lot of time writing Bash scripts and managing game servers, which taught me how to dig through logs and fix authentication errors when things go wrong. I'm also not afraid to get into the hardware side; I've spent time troubleshooting system-level stability issues and optimizing PC builds from the ground up.

A quote I really relate to is by Chris Burke: **"Giving up is not my style. I just want to do something that's worthwhile."** To me, that sums up why I love tech. Every time I hit a bug in a C# program or a driver conflict in an Android emulator, it's an opportunity to learn something new and evolve how I solve problems. I don't just want to write code that works; I want to understand exactly *how* and *why* it works so I can build better systems.

I'm really impressed with what George Brown is doing with their IT program, and I'd love the chance to show you what I can contribute to the team. Thanks for taking the time to look at my portfolio and resume.

Best regards,

Dominic Frydryk
