TECHNICAL SKILLS

- **Infrastructure & OS:** Linux/Unix (Ubuntu/Debian), Bash/Shell Scripting, Windows OS Administration.
- **DevOps & Cloud Tools:** Git/GitHub, Docker, CI/CD pipeline concepts, Log Management, Systemd.
- **Systems & Networking:** Virtualization (Hypervisors, Android Emulator), Hardware Architecture, TCP/UDP Protocols.
- **Software Engineering:** Python, Node.js, C#, JavaScript/TypeScript, GraphQL, REST APIs, MongoDB, PostgreSQL.

TECHNICAL PROJECTS

Full-Stack Employee Management System | *Node.js, GraphQL, MongoDB, Express*

- Architected a scalable backend for an **Employee Management System**, implementing **GraphQL** to optimize data retrieval and reduce over-fetching.
- Designed a NoSQL database schema in **MongoDB** to efficiently manage complex employee profiles and departmental data.
- Managed version control via **GitHub**, maintaining a clean commit history for collaborative code reviews.

Linux Infrastructure & Server Administration | *Linux, Shell Scripting, CLI*

- Administered and configured dedicated Linux-based remote servers, ensuring high availability and resolving complex authentication failures and connectivity bottlenecks.
- Utilized **Linux CLI** utilities (**grep**, **tar**, **awk**) to automate file management and parse extensive system logs for performance optimization.
- Resolved **Android Studio** development environment conflicts by troubleshooting hypervisor driver installations to ensure stable mobile emulation.

EDUCATION

Advanced Diploma in Computer Programing and Analysis | George Brown College *Expected Graduation: 2026*

- **Relevant Coursework:** Linux/Unix Operating Systems, Network Architecture (COMP3104 Devops), Database Management, Object-Oriented Programming.

EXPERIENCE / TECHNICAL ACCOMPLISHMENTS

Systems Administrator | *Independent Projects / Freelance*

- **OS Optimization:** Managed dual-boot and virtualized environments, configuring partitioned storage and kernel parameters to ensure 99.9% uptime for development-heavy workloads.
- **Environment Automation:** Developed custom Bash scripts to automate environment setup, package management, and routine system backups.
- **Network Configuration:** Configured local and remote network environments, managing firewall rules and port forwarding to facilitate secure application deployment.

PAST WORKPLACES

- **Starsky Fast Foods:** 2040 Dundas St E, Mississauga
